

INTERNSHIP REPORT

ON

AI AND MACHINE LEARNING

(A Report on Summer Internship undertaken at InAmigos Foundation)

Submitted To

School of Computer Science and Engineering

IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of

B.Tech CSE (AI & ML)

By

Name of Student: AYUSHI BISHT

Roll Number: 25SCS1003003212

Semester: 3rd Semester

Batch: 2025–29

Internship Role: AI/ML Intern

Internship Period: 31 August 2026 – 13 September 2026

CANDIDATE'S DECLARATION

I, Ayushi Bisht, hereby declare that the internship report titled “AI and Machine Learning Internship” has been prepared by me as part of the academic requirements of the Bachelor of Technology in CSE (AI & ML) programme. The report presents the learning and activities undertaken during my internship with InAmigos Foundation.

I affirm that the work described in this report reflects my internship learning and participation to the best of my knowledge and has been prepared for academic submission.

Student Name: Ayushi Bisht

Roll No.: 25SCS1003003212

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to **InAmigos Foundation** for providing me with the opportunity to undertake the **AI and Machine Learning Internship**. This internship has been a valuable learning experience that helped me understand the basic concepts of Artificial Intelligence and Machine Learning in a simple and practical manner. Through the different tasks assigned during the internship, I gained exposure to understanding how AI and ML are used in real-life applications and how a machine learning model learns from examples.

I am thankful to the mentors and coordinators at **InAmigos Foundation** for providing proper guidance, instructions, and support throughout the internship. The activities assigned during the internship helped me improve my understanding of technical concepts as well as develop practical skills through hands-on learning. The fundraising drive also gave me an opportunity to improve my communication skills and understand the importance of contributing towards social causes.

I would also like to express my heartfelt gratitude to my **faculty coordinators and teachers at IILM University, Greater Noida**, for their valuable guidance and encouragement during the preparation of this internship report. Their support helped me organize my learning and present my internship experience in a structured manner.

I am equally grateful to my **parents, friends, and everyone who supported and encouraged me** during this internship. Their constant motivation and support helped me complete the assigned activities with dedication and confidence.

Finally, I am thankful to everyone who directly or indirectly contributed to making this internship a meaningful and enriching learning experience.

INTERNSHIP OFFER LETTER

The Internship Offer Letter is attached as supporting documentation for the internship. The completion certificate section has intentionally not been included at this stage.

InAmigos®
Uniting Minds For Change

Registration Number – U85300CT2020NPL010641
CSR - 1 Registered - CSR00083159

31/08/2026

Offer Letter

Dear **Ayushi Bisht**,

We are pleased to offer you the internship position of **AI Machine Learning** at InAmigos Foundation. Below are the details of your internship:

Duration of Internship: Two Weeks.

Working Hours: The working hours for this internship are flexible, allowing you to adjust according to your availability. You are expected to dedicate a reasonable amount of time to the tasks and responsibilities assigned.

Location: This internship generally allows for remote work. However, if the role requires fieldwork, you will be expected to attend fieldwork at a site near your location.

Responsibilities

- Your primary role will be related to the field of your chosen internship. All major tasks assigned to you will align with this primary focus. Additionally, you will be expected to:
- Attend team meetings and actively participate in group discussions and activities.
- Complete tasks assigned by your superiors in a timely and efficient manner.
- Ensure that the tasks given to you are completed with the utmost care and responsibility.
- As a secondary responsibility, you will contribute to the organization's fundraising efforts, as this is crucial for your stipend.

Stipend: The stipend for this internship will be 20% of the donation raised by you during your internship period. The stipend is directly linked to the donations raised and may vary accordingly. Please note that while your main tasks will be aligned with your primary internship role, fundraising activities will be an essential part of your responsibilities to ensure the stipend. Fundraising is not a mandatory task for achieving a completion certificate. It is an optional task.

Terms and Conditions:

By accepting this internship, you agree to the following:

- InAmigos Foundation may use any content you provide, including reports, presentations, and other work, in a professional manner.
- Maintain professionalism and respect at all times.
- Adhere to all foundation policies and procedures during the internship.
- All work created during the internship will remain the property of InAmigos Foundation, unless otherwise agreed.
- Maintain confidentiality regarding sensitive information.
- Meet deadlines and complete tasks as assigned. Failure to do so may result in termination.
- Inform the foundation if you can no longer continue the internship, providing the appropriate notice.

Confidentiality: You are required to maintain the confidentiality of any information you receive during your internship. You are not permitted to disclose any sensitive or proprietary information related to InAmigos Foundation's operations or donors.

Termination: Either party may terminate this agreement with written notice, subject to the terms agreed upon.

Kindly sign below to confirm your acceptance of this offer and send the signed copy to foundation's email at hr@inamigosfoundation.org.in.

Authorized Signatory
Name: Ms. Shiwani
Designation: HR Head

INTERNSHIP COMPLETION CERTIFICATE

InAmigos®
Uniting Minds For Change

CERTIFICATE OF INTERNSHIP

Ayushi Bisht

This certificate acknowledges the successful completion of AI Machine Learning Internship at InAmigos Foundation from 31/08/2026 to 13/09/2026.

18/09/2026

 - 4.8.5 Task 5– AI & ML in the Real World 
 - 4.9 Expected Outcomes
 - 4.10 Work and Communication Proof
5. Bibliography / References

4. PROJECT / INTERNSHIP DESCRIPTION

4.1 Introduction

Artificial Intelligence (AI) and Machine Learning (ML) are important areas of modern technology. AI focuses on creating systems that can perform tasks that normally require human intelligence, while Machine Learning enables systems to learn patterns from examples and use those patterns to make decisions or predictions.

This internship with InAmigos Foundation provided an introductory and practical learning experience in AI and Machine Learning. The internship activities were designed to build understanding of basic concepts, observe how machine learning systems learn from data, explore a simple machine learning model, and participate in a fundraising activity.

4.2 Organization Profile

InAmigos Foundation is a non-profit organization working towards social welfare and community development. The organization works with volunteers and participants to support social impact initiatives. The internship provided an opportunity to learn technical concepts while also understanding the importance of social participation and outreach.

4.3 Problem Statement

Artificial Intelligence and Machine Learning can appear complex to beginners because they involve technical terminology, data, models, and algorithms. There is a need for simple, activity-based learning that helps students understand the basic concepts and observe how a machine learning system works in practice.

The internship addressed this learning requirement through structured tasks covering AI and ML fundamentals, the learning process of machines, basic model exploration using a beginner-friendly platform, and participation in a fundraising drive.

4.4 Project Objectives

To understand the basic concepts of Artificial Intelligence and Machine Learning.

To learn how machine learning systems identify patterns from examples.

To understand the working concept behind machine learning through real-life applications.

To gain basic hands-on experience with a beginner-friendly machine learning platform.

To observe the training and testing process of a simple machine learning model.

To develop communication, documentation, and presentation skills.

To participate in a fundraising drive and contribute to awareness for the foundation's social initiatives.

4.5 Scope of the Internship

The internship focused on introductory AI and Machine Learning learning activities along with a social-impact fundraising activity. The work included understanding basic concepts, studying real-life applications, exploring how a machine learns, using Teachable Machine for basic model exploration, documenting the learning, and participating in fundraising outreach.

The internship was primarily educational and activity-based. It did not involve development or deployment of a large-scale production AI/ML system.

4.6 Technologies and Tools Used

- Teachable Machine – for beginner-level machine learning model exploration.
- MS Word / PDF – for preparing and documenting internship tasks.
- Google Drive – for organizing and submitting internship work.
- Web browsers and search engines – for learning and research.
- AI tools – for understanding concepts and simplifying research material.
- LinkedIn / social media – for professional sharing of internship learning where applicable.

4.7 System Architecture / Workflow

Since the internship was learning- and activity-based rather than a software development project, the system architecture can be represented as a structured learning workflow:

**Learning Objective → Concept Understanding → Real-Life Examples →
Hands-on Model Exploration → Training → Testing / Observation → Documentation**

4.8 Methodology

The internship followed a simple learning and activity methodology. Each task involved understanding the instructions, learning the required concept, completing the activity, observing the outcome, and documenting the work. The four major tasks are described below.

4.8.1 Task 1 – Understanding AI and Machine Learning

The first task focused on understanding the basic concepts of Artificial Intelligence and Machine Learning in simple language. The objective was to build a clear foundation before moving to practical machine learning activities.

Artificial Intelligence refers to the ability of a computer system to perform tasks that normally require human intelligence, such as understanding information, recognizing patterns, or assisting with decisions. Machine Learning is a part of AI in which a system learns patterns from examples or data instead of being explicitly programmed for every individual situation.

Real-life examples were used to make the concepts easier to understand. Examples include recommendation systems that suggest products or videos, face recognition systems that identify patterns in faces, and voice assistants that process spoken commands.

This task helped in developing a basic understanding of how AI is used in everyday life and how Machine Learning forms an important part of many AI applications.

4.8.2 Task 2 – How Machine Learns

The second task focused on understanding what a machine learning system learns and how it uses that learning. Three real-life machine learning applications were considered as examples. For each application, the learning process was understood in terms of the examples available to the system, the patterns identified from those examples, and the way the learned patterns are used for a new input.

A simple conceptual flow can be represented as:

Examples / Data → Learning Patterns → Trained System → New Input → Result / Prediction

The activity helped demonstrate that a machine learning system does not learn in the same way as a human. It uses examples and patterns in data to create a model that can be applied to new inputs.

4.8.3 Task 3 – Machine Learning Model Exploration

The third task provided basic hands-on exposure to a Machine Learning model using Teachable Machine. The activity involved working with an image-based model and observing the basic stages of model creation, training and testing.

The task helped in understanding the practical idea that a model can be trained using examples and can then use what it has learned to classify or recognize new inputs. The activity also introduced the importance of providing suitable examples and checking the model's output after training.

The practical workflow can be summarized as:

Collect Examples → Create Classes → Train Model → Test Model → Observe Prediction → Document Result

4.8.4 Task 4 – Fundraising Drive

The fourth task involved participating in a fundraising drive associated with InAmigos Foundation. As part of the activity, I reached out to people in my personal and known network and encouraged them to support the foundation's social initiatives.

The activity provided practical exposure to communication, awareness building and social outreach. It also helped develop confidence in approaching people, explaining the purpose of an initiative and encouraging participation in a social cause.

4.8.5 Task 5 – AI & ML in the Real World

The fifth task focused on understanding how Artificial Intelligence and Machine Learning can be applied to solve real-world problems. Five problems from areas such as agriculture, healthcare, education, transportation, and environment were identified, along with suitable AI/ML-based solutions.

The activity helped in understanding how AI and ML can be used to address practical challenges, improve efficiency, support decision-making, and create meaningful impact in different fields.

A simple conceptual flow can be represented as:

Real-World Problem → AI/ML Solution → How It Works → Expected Benefit → Real-World Impact

4.9 Expected Outcomes

- A clear understanding of basic Artificial Intelligence and Machine Learning concepts.
- Better understanding of how machine learning systems learn from examples and use learned patterns.
- Basic hands-on exposure to an image-based machine learning model through Teachable Machine.
- Improved ability to explain technical concepts using simple real-life examples.
- Improved documentation and professional communication skills.
- Practical experience in social outreach through participation in a fundraising drive.

4.10 Work and Communication Proof

The Internship Completion Certificate issued by InAmigos Foundation, along with email/WhatsApp communication proof and LinkedIn sharing screenshots for each task, are attached as an annexure to this report.
